

Experience
the next generation
of Spinal Needles

Spinal anesthesia – old hat?

We do not think so!

Spinal Anesthesia is still (and will remain) the technique of choice, when it comes to lower limb surgery (92%), C-section (72%), abdominal surgery (71%).¹

With more than 100M procedures each year, Spinal Anesthesia is the most used Regional Anesthesia technique worldwide.² And the numbers are expected to rise. At B. Braun, we make it our mission to give this core area of Regional Anesthesia the attention it deserves.

Did you know that the incidence rate of failed Spinals ranges higher than 3% while the success rate of the first attempt is only 87%?³

Considering how many patients each

Year: 100M

Month: 8.3M

Day: 270,000

are undergoing this procedure worldwide, even a slight improvement can make an impactful difference. Imagine if just 1% of the above mentioned patients could receive a "first time right" Spinal.

Expect more:

Feel the difference and experience the next generation spinal needle portfolio comprising Spinocan™, Pencan™ and Atraucan™ – worldwide renowned brands from the market leader in Regional Anesthesia.

Usage of Spinal Anesthesia per procedure

Precision. Quality. Control.

From the market leader in Regional Anesthesia

The new B. Braun spinal needle portfolio is engineered to deliver what matters: Precision. Quality. Control.

Discover our comprehensive range of spinal needles. Our portfolio features a variety of options each crafted to provide exceptional performance for spinal anesthesia and diagnostic procedures. With a focus on patient comfort and ease of use for the clinician, our spinal needles ensure reliable results.

PRECISION

CSF^{ID} System for improved visualization of CSF flashback in the needle hub aiding proper needle placement

Prism has a silver shine before CSF enters the hub

Prism turns transparent once CSF is in the hub

QUALITY

Tritan™ – new hub material

- stress-crack resistant
- highly transparent
- not manufactured with: Latex/ Natural Rubber, BPA, DEHP, PVC

CONTROL

Ergonomic Hub

- designed for enhanced needle control, improved grip and tactile feedback
- for both spinal needle and introducer needle

Design matters for better outcomes: Features & advantages

Unique CSF^{ID} System:

Prism and magnifying lense for improved visualization of CSF flashback

New hub material TRITAN™

- stress-crack resistant
- highly transparent
- not manufactured with:
Latex/natural rubber,
BPA, DEHP, PVC

Ergonomic Hub

- designed for enhanced needle control, improved grip and tactile feedback
- for both spinal needle and introducer needle

Spinocan™

Quincke bevel: sharp bevel for low puncture force, even in challenging tissue which can be common for example in elderly patients

Pencan™

Atraumatic Pencil Point bevel: Allows for minimal intrathecal penetration depth, which is beneficial to avoid incomplete blocks, and reduces the risk of PDPH occurrence

Stylet nose

Indicating "bevel up" and therefore helping for secure orientation during anesthetic application

Color-coded needle hub

Easy identification of needle size according to ISO standard

Precision ground metal stylet

Minimized chance of tissue coring

Spinal anesthesia – you have the options

- Wide needle range with different diameters and lengths
- Special designs for paediatrics and obese patients
- B. Braun color code according to ISO

Spinal anesthesia portfolio overview:

One for every need
