

# Sterile barrier systems in the 10-R model

The 10R model illustrates different strategies to reduce resource use – from refuse and rethink to repair, reuse, remanufacture, and eventually recycling or recovery. The more high-ranking principles are applied to a product, the more it becomes a circular one. AESCULAP® Sterile Containers are circular products, as they are reusable, repairable, and recyclable. Blue wrap, on the other hand, as a single-use product remains closer to a linear economy, since it is mainly disposed of with only limited recycling options.

**AESCULAP® Sterile Containers are circular products!**
